Areas treated: Little Wings (Neck and Shoulders)

Change of the patient's condition during and after session:

Headaches were eliminated during session and have not returned. Patient can study without spiking, or any headaches.

Total number of sessions: One

Total time of treatment (days, weeks): One

Final result of treatment: Headaches were eliminated during session and have not returned. Patient can study without spiking, or any headaches.

COMMENTS:

The 735 AG Slider was used with LENS for this person's issue. The LENS, Low Energy Neurofeedback System, was used to relax and improve cortical functioning as it is well known for beneficial results with TBIs. In the same session, the 735 Slider was implemented to relax the neck muscles and allow for a rebalancing of the occipital cranial base which might have a strong contribution to the headaches, especially given the nature of the collision.

Comments on the new device working:

I often combine additional relaxation therapies into a mixed modality approach for our clients. One main tool of the mixed modality approach is the LET Medical SCENARs, now in particular, the 735AG Slider. It is the only SCENAR I presently use. Our clients love the feel of this latest generation device, not to mention very fast results.
